The Peacock - Demo Manual

A quick guide to the hotel booking demo - what it solves, and how to walk through it.

What it's for

A hotel takes bookings from many places at once - walk-ins, phone calls, its own website, and travel sites like MakeMyTrip. It's easy to double-book a room or lose track of who is arriving. This app keeps every room, booking and listing in one place: the hotel always knows what's free, guests can book and manage their own stay, and the same room is never sold twice.

How to use it

Use the switch at the top right to move between the guest view and the front desk.

Guest

1. Choose your dates - rooms show as available or booked.
2. Pick a room and reserve it.
3. Enter your details and pay (test mode, no real payment).
4. Get a confirmation with a booking number.
5. Sign in to see your booking and its details under My Trips.

Front desk

1. See every booking in one list, with where each one came from.
2. Add or edit rooms and set their status: ready, cleaning or maintenance.
3. Open Channels and simulate a booking - every travel site's availability drops together, so no room is double-sold.

Good to know

- It's a demo, so no real payment is taken.
- To sign in, use the code 1234.
- Sign in with 9829011223 to see a ready-made booking.
- Use Reset demo data in the front desk to start fresh.
